

# 电子表格 列头排序报表

## 功能简介

列头排序报表是指在报表在浏览状态下，支持字段排序即单击列头字段实现排序。

**实现字段排序的前提：被点击的列头单元格不允许是合并单元格或来源于公式。**

- 功能简介
- 功能入口
- 演示效果
- 分析定制
- 示例资源

- 1、支持排序功能的报表类型有：列表式报表、分组报表、分片报表。
- 2、分片报表，只适用于左右分片且各片间没有数据关系的情况，则分别排序，一片不会影响其它片。
- 3、数值和分类列是可以进行多列排序的，表示当前成员相同的数据在进行排序。
- 4、排序情况：鼠标移动到排序列头，点击上箭头，则为按该字段数据升序排序；点击下箭头，则为按该字段数据降序排序。第一次点击箭头为设置排序，第二次点击箭头为取消排序。
- 5、多列数值时，可以按Ctrl键进行多列排序，且根据选择的顺序选择优先级执行。
- 6、支持排序的字段有：原始字段、计算字段。

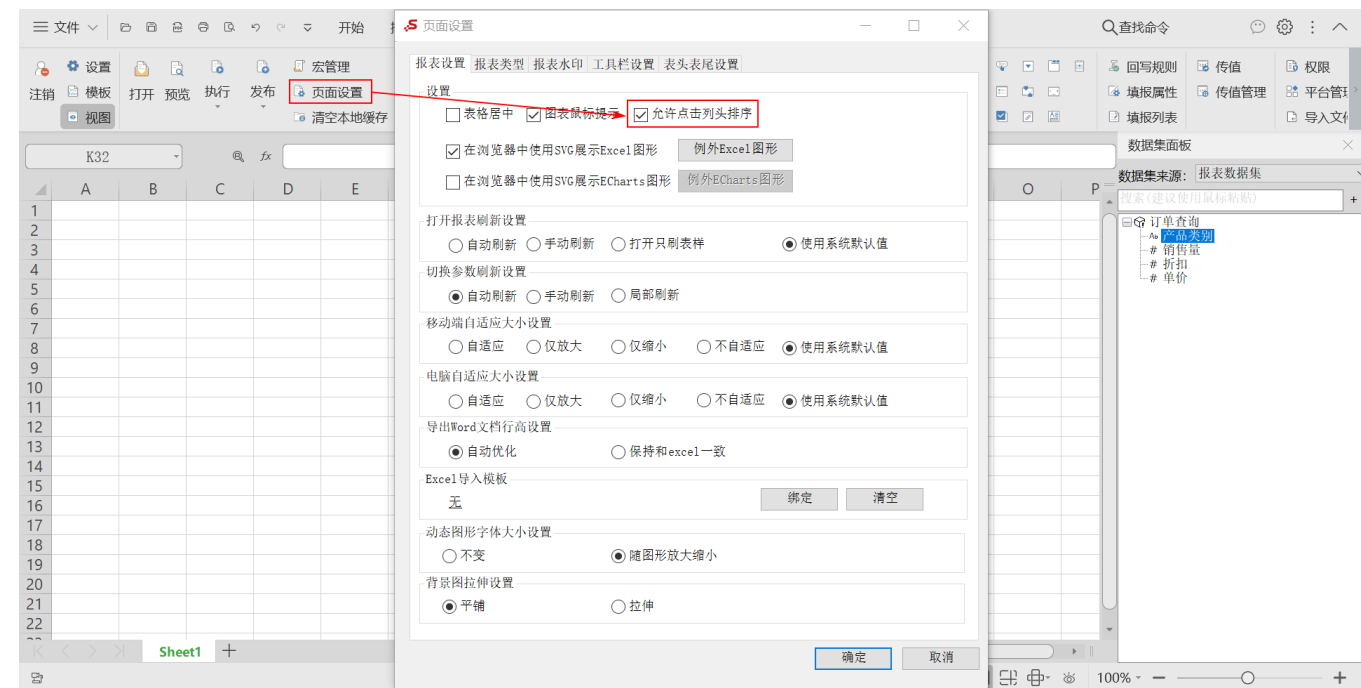

|   | A | B           | C         | D       | E |
|---|---|-------------|-----------|---------|---|
| 1 |   |             |           |         |   |
| 2 |   | 发货区域        | 运费        | 平均运费    |   |
| 3 |   | ↓发货区域(订单模型) | ↓运费(订单模型) | #VALUE! |   |
| 4 |   |             | 原始字段      | 计算字段    |   |
| 5 |   |             |           |         |   |
| 6 |   |             |           |         |   |
| 7 |   |             |           |         |   |

**作用：**用于报表浏览时进行排序操作。

**适用场景：**适用电子表格排序浏览情况。

## 功能入口

点击工具栏里的 **页面设置** 按钮，在弹出页面勾选 **允许点击列头排序**。

**当报表类型为清单表时，不支持列头排序，页面设置中允许点击列头排序按钮为灰色。**

## 演示效果

下面展现的是在电子表格中点击列头实现排序的效果：

| 产品    | 销售量  |
|-------|------|
| 点心    | 7927 |
| 调味品   | 5276 |
| 谷类/麦片 | 4553 |
| 海鲜    | 7681 |
| 日用品   | 9132 |
| 肉/家禽  | 4199 |
| 特制品   | 2990 |
| 饮料    | 9534 |

## 分析定制

各类型报表列排序的实现详情如下：

| 报表类型 | 要求                              | 效果    |      |      |    |
|------|---------------------------------|-------|------|------|----|
| 清单报表 | 针对列表式的清单报表，即：字段的扩展属性为“列表，从上到下”。 | 产品类别  | 销售量① | 折扣②  | 单价 |
|      |                                 | 特制品   | 2990 | 0.05 | 32 |
|      |                                 | 肉/家禽  | 4199 | 0.06 | 54 |
|      |                                 | 谷类/麦片 | 4553 | 0.05 | 20 |
|      |                                 | 调味品   | 5276 | 0.05 | 23 |
|      |                                 | 海鲜    | 7681 | 0.06 | 21 |
|      |                                 | 点心    | 7927 | 0.06 | 25 |
|      |                                 | 日用品   | 9132 | 0.05 | 29 |
|      |                                 | 饮料    | 9534 | 0.06 | 38 |

| 分组报表 | 单击非分组字段，实现的是组内排序。<br><br>数值和分类列是可以进行多列排序的，表示当前成员相同的数据在进行排序。 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |       |     |     |      |      |      |       |      |      |      |    |      |    |      |     |      |    |      |                                                                                                                                                                                                                                                                                                                                                                                  |    |     |      |    |     |       |     |    |       |     |    |       |    |    |      |      |    |      |      |    |     |      |    |     |      |    |    |      |    |    |     |    |    |      |    |    |      |    |    |    |      |    |    |      |    |    |      |    |    |    |     |    |
