

报表数量超过限制

(本文档仅供参考)

问题说明：

制作报表时，系统提示报表数量超过限制，怎么查询超出限制的报表资源数据呢？

解决方案：

从提示分析是license对报表数量有限制，烦请联系商务进一步沟通license的事宜。

系统在检测报表数量时，内置的报表资源是不会计算在内的，具体可以通过以下SQL语句进行查询，可以用数据库客户端工具连上当前smartbi知识库进行查询：

```
select
count(*)
from
t_restree
where
c_restype in (
'SIMPLE_REPORT',
'SPREADSHEET_REPORT',
'SMARTBIX_PAGE',
'COMBINED_QUERY',
'OLAP_DATASET',
'Dashboard',
'OLAP_REPORT',
'INSIGHT'
)
and c_resid not like 'TEMP_%'
and c_resid not in (
select
c_id
from
t_builtin_reports
where
c_type in (
'SIMPLE_REPORT',
'SPREADSHEET_REPORT',
'SMARTBIX_PAGE',
'COMBINED_QUERY',
'OLAP_DATASET',
'Dashboard',
'OLAP_REPORT',
'INSIGHT'
)
)
)
```

其中t_builtin_reports是内置资源的明细表，可参考以下sql可查询系统内置报表明细数据：

```
SELECT
    c_resid,
    c_resname,
    c_restype
FROM
    t_builtin_reports b
    left join t_restree on b.c_id = c_resid
```

如果还可以正常登录smarbi系统，可以采取如下方式：

1、新建数据模型，然后基于【SYSTEM知识库】创建SQL查询进行查询：

基于SYSTEM知识库，创建SQL查询，把SQL粘贴到SQL编辑区域即可查询

The screenshot shows the smarbi system interface. On the left is a sidebar with navigation icons. The main area is divided into two panels. The left panel, titled '数据源' (Data Source), shows a tree view of the 'SYSTEM知识库' (SYSTEM Knowledge Base) with various categories like 'DEFAULT', 't_offline_export', 't_operationlog', 't_scheduledtask', 't_session', 't_ssreport_namedsql', 't_task', 't_alert_log', '用户属性' (User Properties), and '函数列表' (Function List). The right panel, titled 'SQL查询' (SQL Query), contains a text editor with the following SQL query:

```
from
t_builtin_reports
where
c_type in (
'SHIPLE_REPORT',
'SPREADSHEET_REPORT',
'SMARTBIX_PAGE',
'COMBINED_QUERY',
'OLAP_DATASET',
'Dashboard',
'OLAP_REPORT',
'INSIGHT'
)
)
```

Below the editor, the results are displayed as a table with one row and one column:

count(*)
541

At the bottom of the results area, there is a pagination bar showing '共 1 行 每页 10 行' (Total 1 row, 10 rows per page) and a '刷新' (Refresh) button.
